**DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE**

The Gilpin Falls Hydro Electric Plant Site is located at the foot of Gilpin Falls. The plant was built in the latter half of 1905 by Frederick Shoff of Colmanville, Pennsylvania. The plant when completed consisted of a frame power house, several water gates, a steel and concrete flume, and a frame boardwalk.

The power house is no longer standing, but many early photographs are still in existence. The building was three bays long by one bay deep with an entrance in the west gable end. The gable roof was covered with wood shingles and had a shed dormer on the north side. A small inside end chimney of brick was located in the west gable end. TTe building had wooden siding and a stone foundation.

The building was destroyed about the time of the Second World War and the metal substances were removed.

STATEMENT OF SIGNIFICANCE

The Gilpin Falls Hydro Electric Plant was the first electric plant in Cecil County. It operated for only several years before giving way to the Conowingo Dam system.

An interesting storey was that the town of North East was not all too sure of whether or not it wanted electricity, but became the first town to have lights. Apparently members of the town board voted no.

The site might have some archeological importance to industrial historians.
